

HYGEA - Blockchain Based Personal Health Record Exchange Platform

Goals

Problems with the Precision Health Management

Solutions We Provide

Blockchain - Data Exchange and Verification

Public ledger records "authorized exchange records" and "record verification information". Verify the correctness of the record content through the hash.

FHIR – Data Standardization

Adopt the public medical record standard - FHIR. Let the medical record be exchanged efficiently. To achieve higher interoperability, it can be connected in series with other systems.

Personal EHR – Precision Health Management

Medical records of international standards can be used to integrate data from various locations, including hospitals, clinics, health checks, IoT devices, personal questionnaires, etc., for accurate multi-dimensional analysis

Highlight

The first complete blockchain medical application solution.

Data encryption and decryption verification mechanism is complete.

International standard application.

BLOCK

CHAIN

Blockchain data content verification.

Personal precision health management solutions.
